PROFESSIONAL SUMMARY

Motivated and results-driven Full Stack & AI Engineer with hands-on experience building scalable, production-ready web applications and intelligent AI-powered systems. Skilled in developing high-performance frontend experiences using React.js and Next.js, architecting secure backend APIs with Node.js and Express.js, and designing robust database solutions with MySQL and vector databases. Experienced in integrating modern AI technologies including RAG pipelines, LangChain, OpenAI APIs, semantic search, and LLM-powered workflows to create real-world intelligent applications.

Strong understanding of software engineering principles, authentication systems, role-based access control, RESTful APIs, cloud deployment, and containerized development environments. Proven ability to take products from concept to deployment while maintaining clean architecture, responsive UI/UX, and scalable system design. Passionate about building impactful digital products, solving complex problems, and continuously learning emerging technologies in AI engineering and full-stack development.

Currently pursuing a BSc in Computer Science & Engineering while actively delivering client-focused solutions and expanding expertise in AI-driven software systems, cloud infrastructure, and modern web technologies.

TECHNICAL SKILLS

Frontend	React, Next.js, JavaScript (ES2024+), TypeScript, Tailwind CSS, Bootstrap
Backend	Node.js, Express, GraphQL, RESTful APIs, MySQL, MongoDB
AI / ML	LangChain, OpenAI API, Pinecone (vector DB), RAG architecture, Rasa NLU
Cloud & DevOps	Docker, Kubernetes, Vercel, CI/CD pipelines
Tools	Git, GitHub, Figma, Postman

KEY PROJECTS

AI Knowledge-Base Platform

Next.js · OpenAI API · Pinecone · LangChain · Vercel AI SDK

- Engineered a production-ready RAG pipeline using LangChain for context-aware natural-language querying of custom document sets.
- Generated and stored vector embeddings with OpenAI + Pinecone, enabling sub-second semantic search across large corpora.
- Built a streaming chat UI with the Vercel AI SDK delivering real-time, low-latency responses.
- Designed robust multi-format data ingestion pipelines (PDF, DOCX, TXT) to support instant knowledge retrieval.

ResearchNet.com

Next.js · OpenAI API · OpenAlex API · MongoDB Atlas · Tailwind CSS · NextAuth.js

- Engineered an **Advanced Academic Discovery Engine** featuring AI-driven query refinement pipelines that dynamically narrow broad research topics into niche fields using the **OpenAI API**.

- **Architected an Intelligent AI Summarization & Comparative Module** that distills long-form research papers into digestible abstracts and anchors side-by-side comparative views for multi-paper metrics.
- **Designed a Fully Responsive, Dual-Mode Interface** with a glassmorphism theme engine (**Tailwind CSS + React Context**), introducing touch-optimized mobile bottom docks to completely isolate and eliminate layout conflicts with global navbars.
- **Implemented Secure Session Management & Document Storage** using **NextAuth.js** and **MongoDB Atlas** schemas, allowing users to safely register, log in, and save papers to a personal persistent library.

Live demo: <https://research-netcom.vercel.app/>

E-Commerce Platform with AI Chatbot

React · Python · Rasa Framework · REST API

- Delivered a feature-complete e-commerce store (cart, checkout, order history) integrated with a custom Rasa NLU chatbot.
- Reduced support overhead by enabling natural-language product search and order-tracking queries through the conversational agent.
- Implemented intent classification and entity extraction models, achieving high accuracy on product and logistics queries.

EDUCATION

Bachelor of Science in Computer Science & Engineering

Sylhet, Bangladesh

EXPERIENCE

Full Stack Developer — Freelance

Remote | 2023 – Present

- Designed, built, and deployed production-grade web applications independently, owning the full lifecycle from wireframe to hosting.
- Maintained a Freelancer.com profile delivering client projects across e-commerce, data platforms, and AI integrations.
- Applied clean-code principles, modular architecture, and code reviews to produce maintainable, well-documented codebases.
- Collaborated with clients to translate business requirements into technical specifications and iterative delivery milestones.
